

The Problem

Fitting rooms are a dead zone in retail. Customers often leave the room to find a new size, color, or styling help, disrupting the shopping experience. This leads to missed sales, slower service, and limited insight into customer behavior.

Our Solution

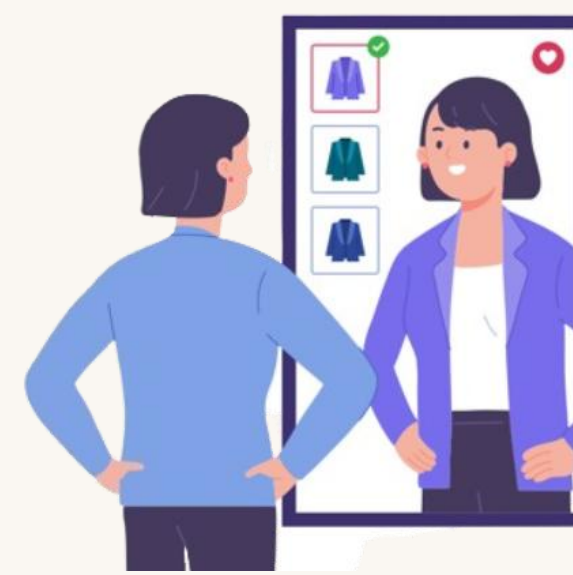

Vestia connects the fitting room to store staff and analytics through an interactive kiosk platform. Customers can scan items, request alternate sizes or colors, and receive outfit recommendations, while associates fulfill requests in real time and managers track store insights.

The Journey

- 1 Scan**
Scan barcodes of items you brought in
- 2 Request**
Tap to request a different size or color
- 3 Discover**
Get algorithmic powered style recommendations
- 4 Receive**
Staff delivers right to your door

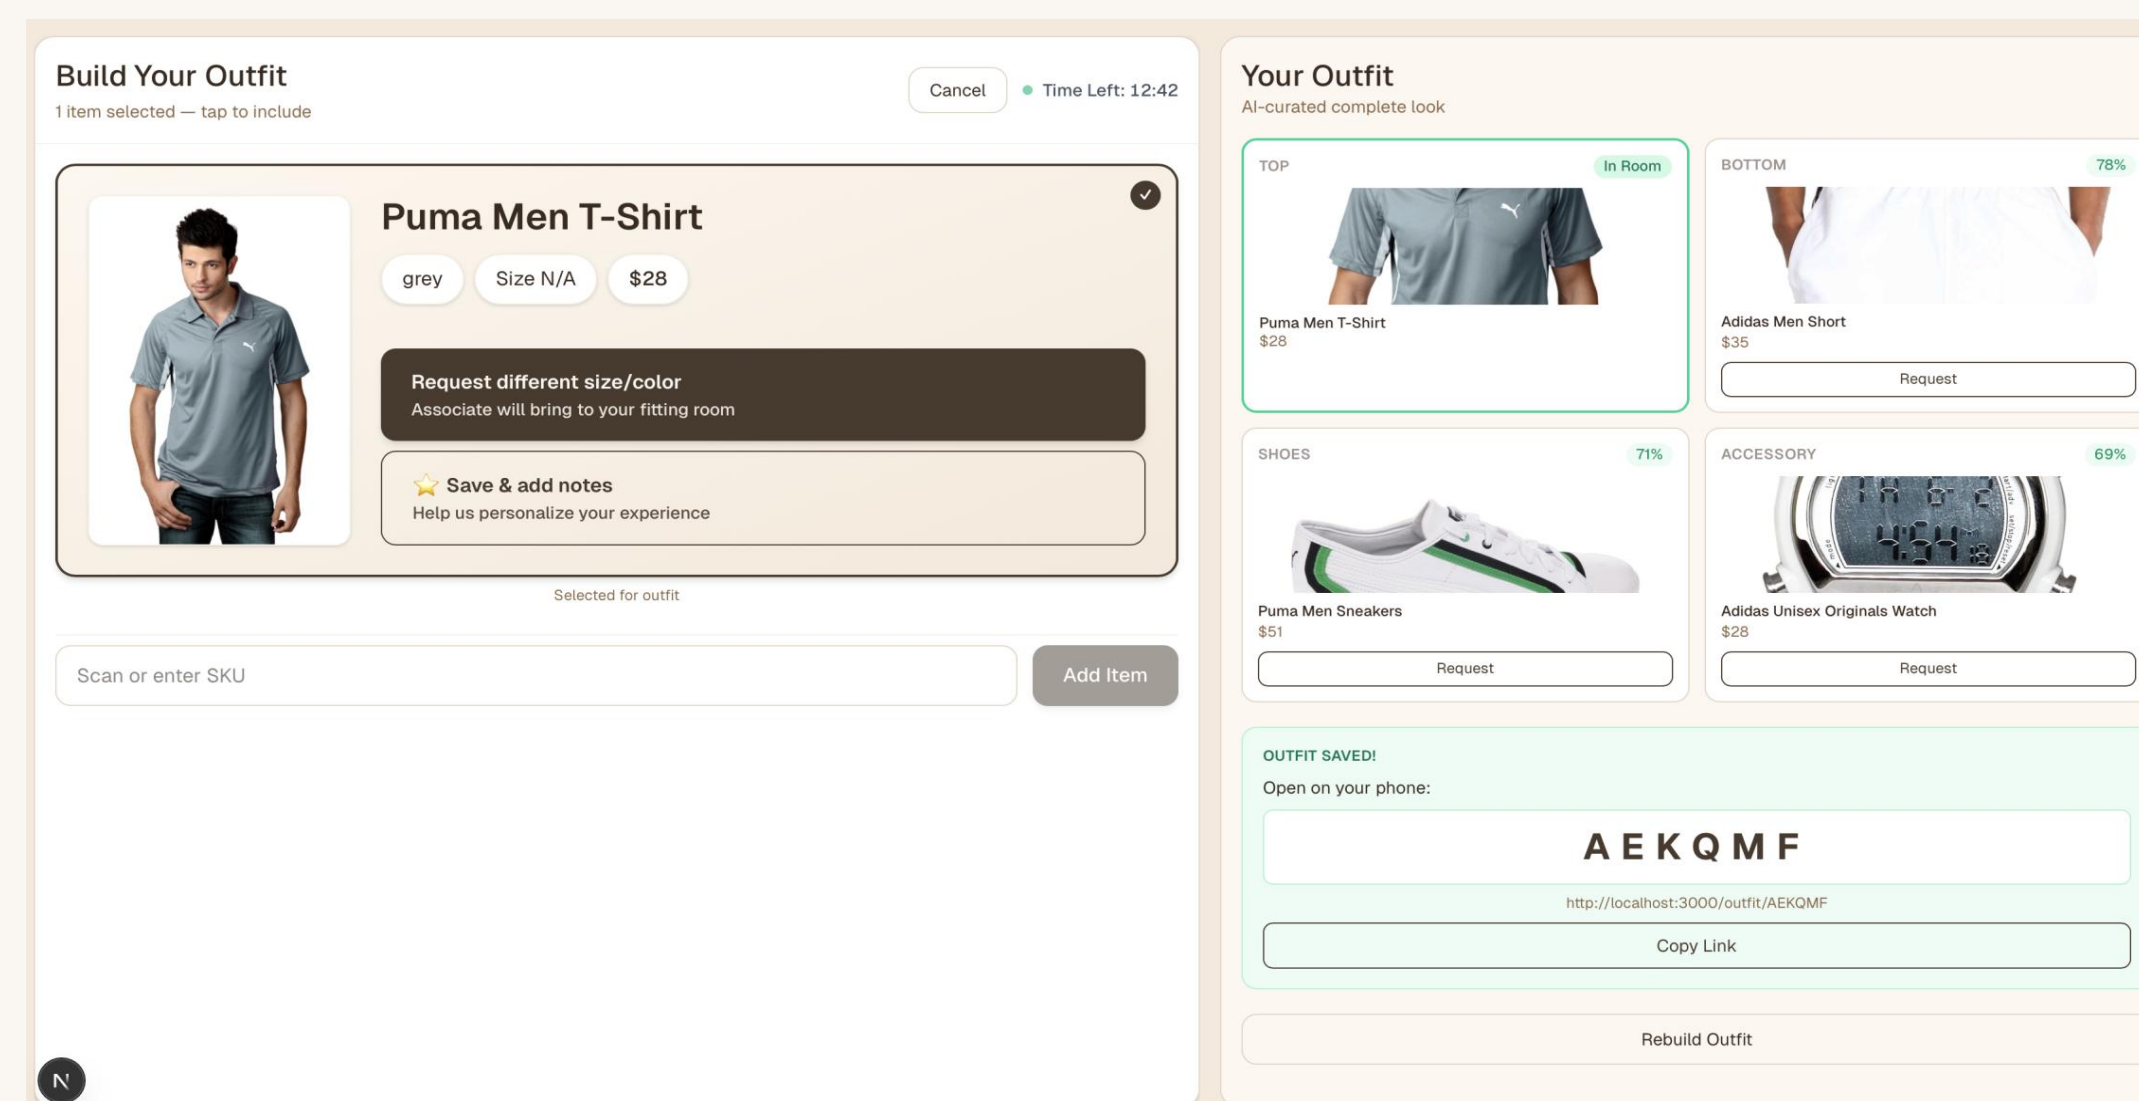

Recommendation Engine

*Your fitting room,
reimagined.*

How Vestia Work

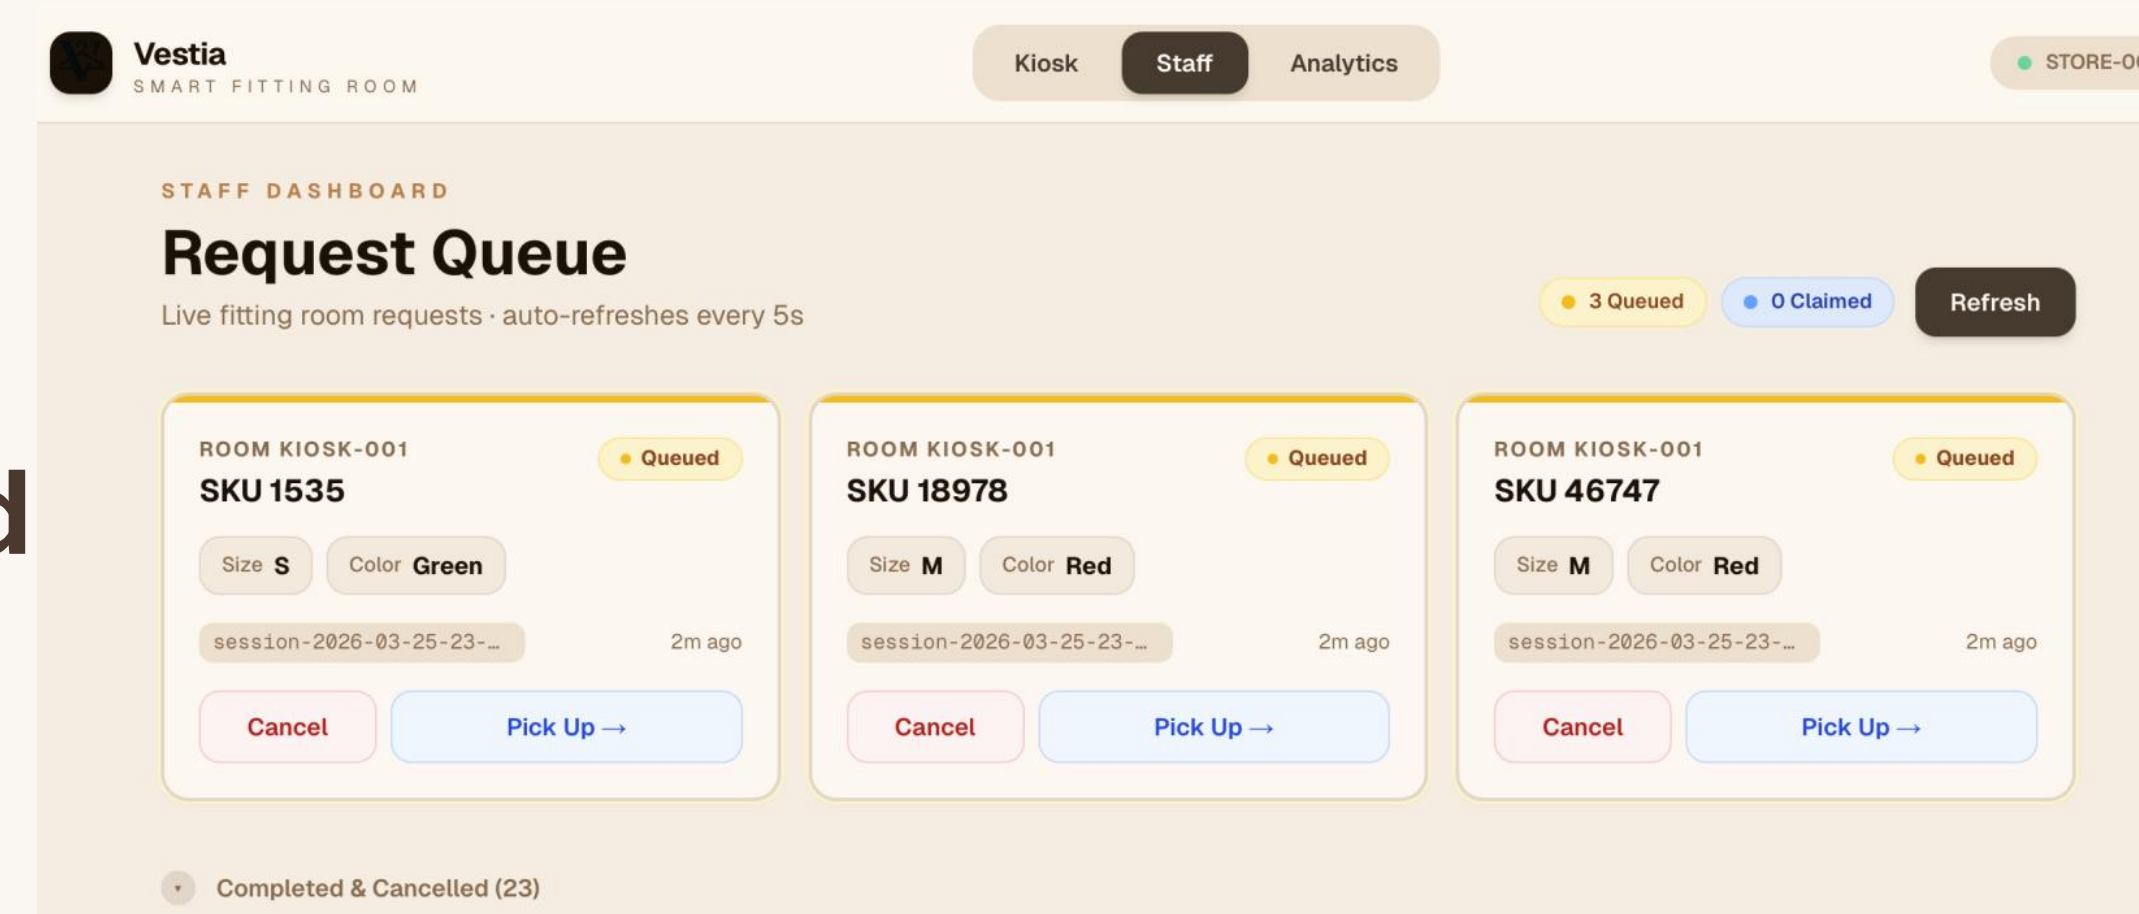

Scan items, request alternate sizes/colors, and view outfit recommendations.

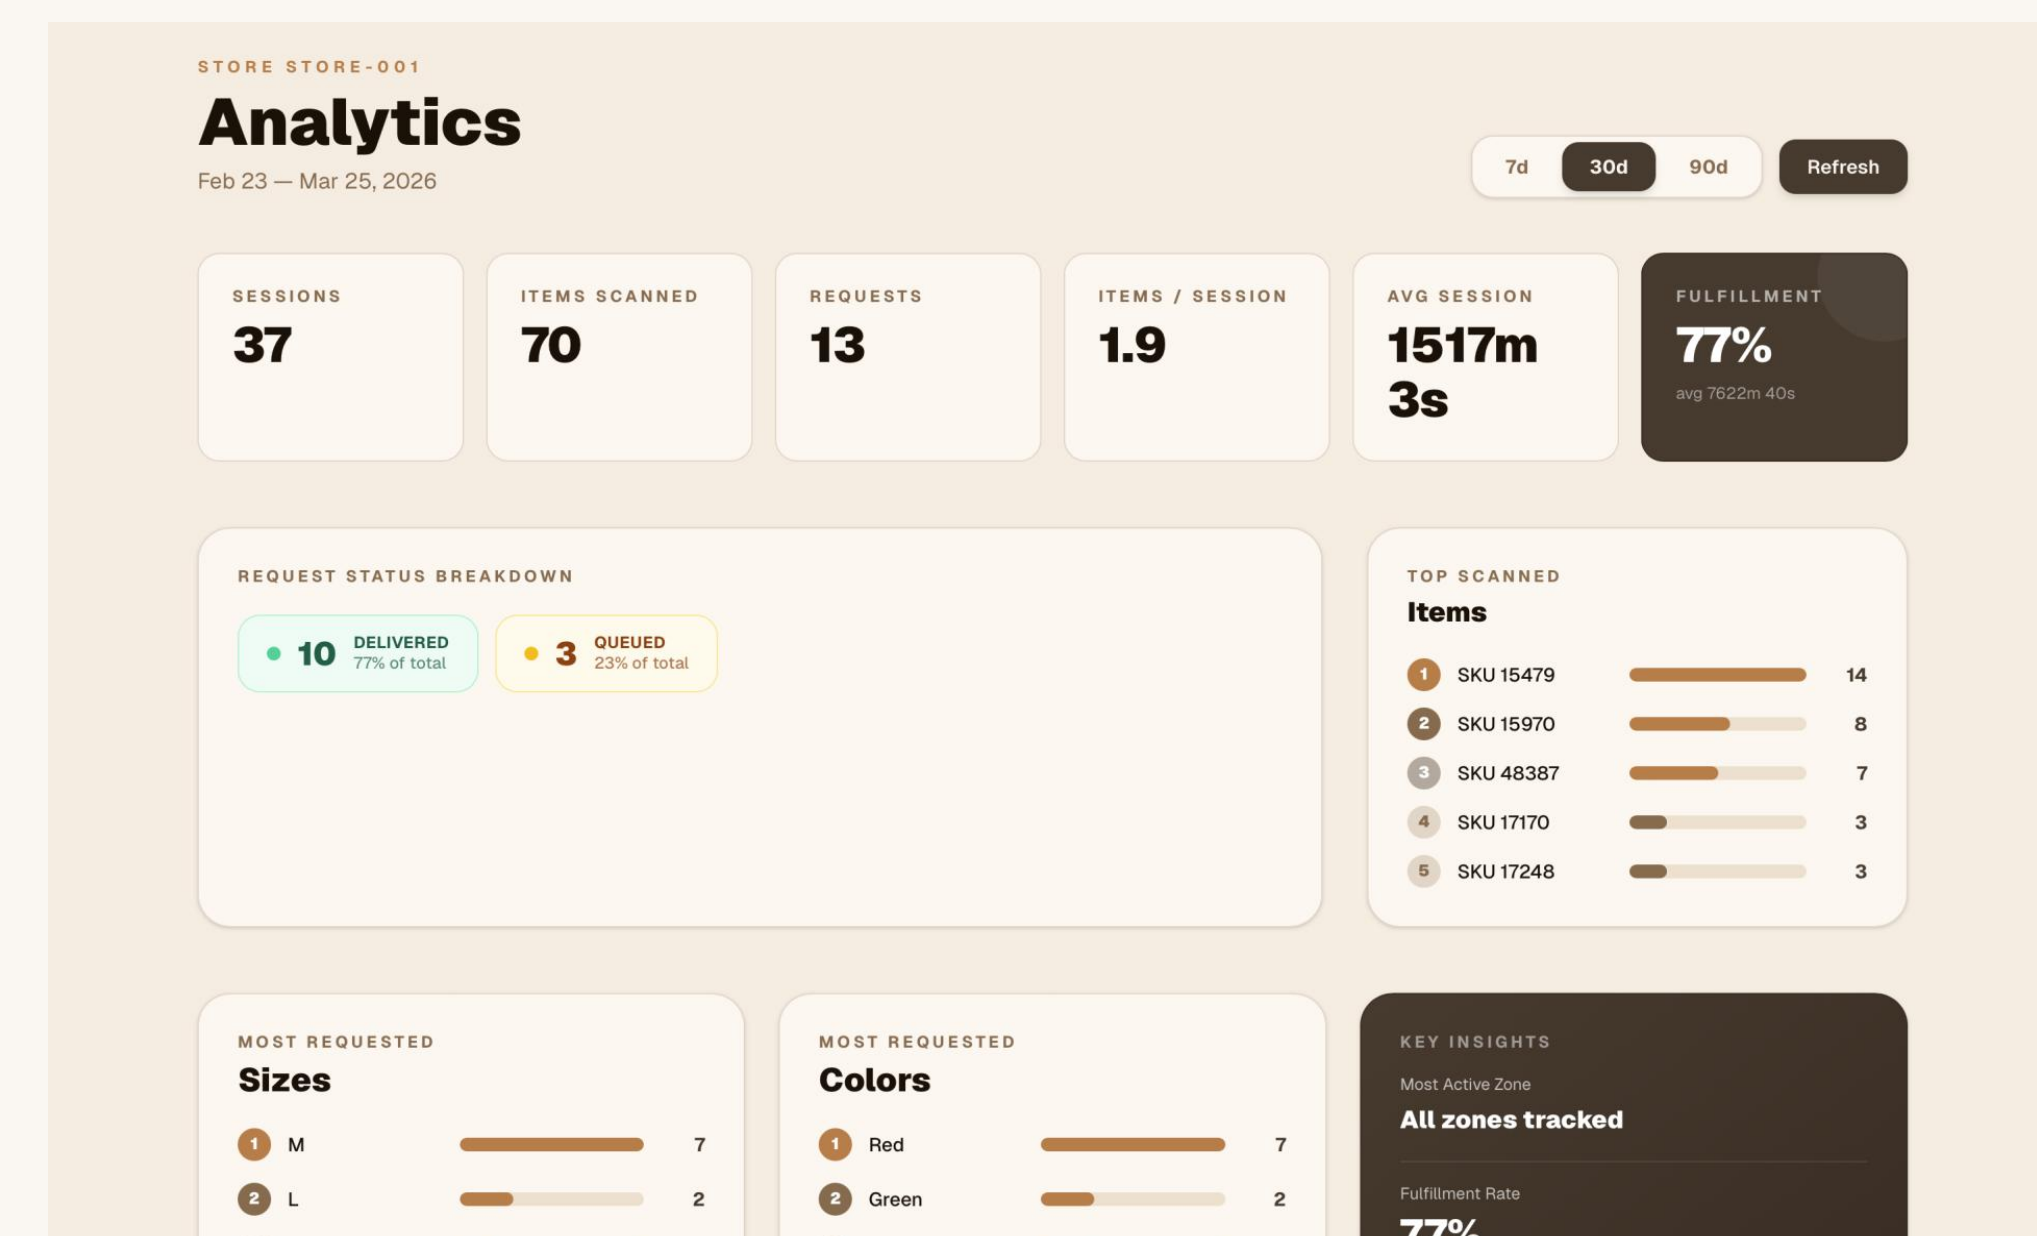

Customer
Kiosk

Associates receive live fitting-room requests and update fulfillment status in real time.

Employee Dashboard

Associates receive live fitting-room requests and update fulfillment status in real time.

Owner
Dashboard

Why Vestia?

No More Leaving the Room

Request sizes and colors without stepping out. Staff bring items to you.

Recommendation System

Our recommendation engine suggests pieces that complement what you are trying on.

Real-Time Staff Coordination

Requests go live to the staff dashboard instantly. No waiting, no guessing.

Store Intelligence

Analytics dashboard gives retailers real-time insights into what customers want.
